The Case of the Shiny Space Lens **Cazul lentilei spațiale strălucitoare**

| Read the camp report and solve the mystery.

| Citește raportul taberei și rezolvă misterul.

Something has vanished at Galaxy Camp!

Tonight, the campers are supposed to observe Saturn through the camp's largest telescope. Unfortunately, one important object has disappeared: the telescope's shiny silver lens cap.

At 4:30 p.m., Noor cleaned the telescope and placed the lens cap on a wooden bench. At 5:00 p.m., everyone left the observation area to have dinner. Nobody returned until 5:45 p.m., when Sam noticed that the cap was missing.

The campers have searched the equipment tent, the dining hall and all six cabins. They have looked inside backpacks, under beds and even in the camp leader's enormous boots. However, they haven't checked the old oak tree yet.

Sam has found several muddy pawprints near the empty bench. Noor has also discovered a trail of biscuit crumbs leading towards the oak tree. The camp leader says that a curious raccoon has visited the campsite three times this week. It has already stolen a spoon, a whistle and one very shiny key ring.

At 6:20 p.m., the campers hear a noise above them. Something is moving between the branches. Noor shines her torch into the tree and spots a striped tail beside a collection of sparkling objects.

The mystery has finally been solved!

Crack the case! | Rezolvă cazul!

1. What has disappeared from the observation area?

2. Which three places have the campers searched?

3. Where haven't they looked yet?

4. What has Sam found near the bench?

5. How many times has the raccoon visited the campsite this week?

6. Which objects has the raccoon already stolen?

7. Who has probably taken the lens cap?

5
